## Assessing the Stability of Company Strategies over Time

Monique Stinson Freight Estimation, Forecasting, and Analysis Manager December 13, 2024

U.S. Department of Transportation Office of the Secretary of Transportation

# **ABMs from a Freight Agent Perspective**

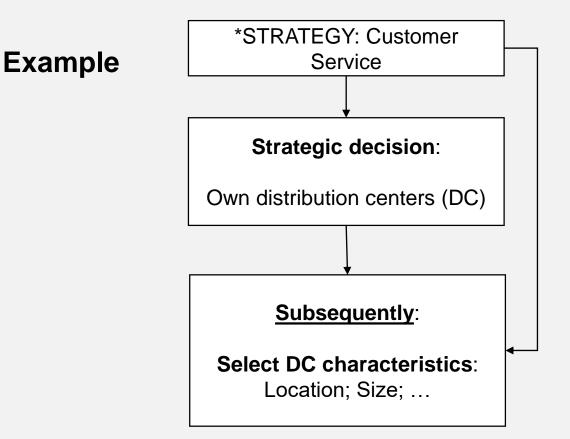

## **Background and Objectives**

**State of practice:** 

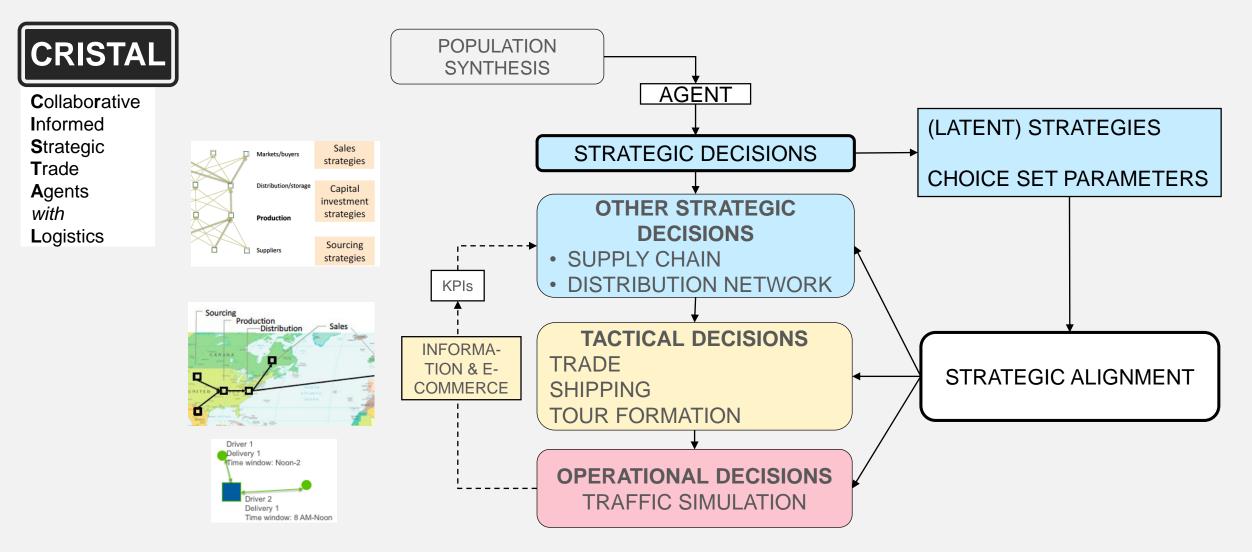

STRATEGIES\*

\*and other variables

But some downstream decisions occur later  $\rightarrow$  Need strategic alignment:

# **CRISTAL: Strategic Alignment in ABMs**

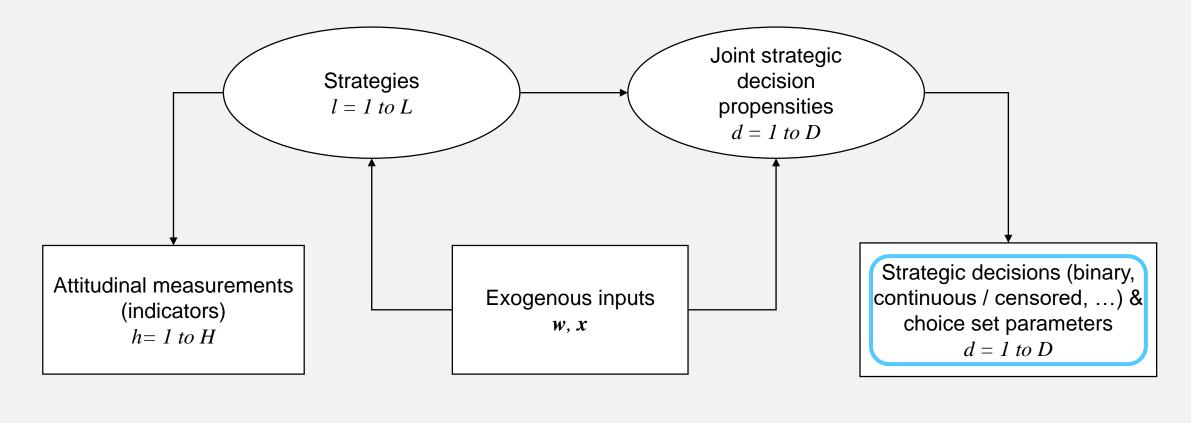

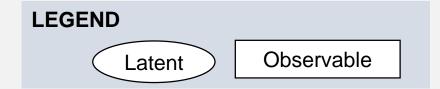

**Bureau of Transportation Statistics** 

Stinson and Mohammadian (2022). Introducing CRISTAL: A model of collaborative, informed, strategic trade agents with logistics. Transportation Research Interdisciplinary Perspectives, Volume 13. https://www.sciencedirect.com/science/article/pii/S2590198222000033

### **SURTLV\* Model to Operationalize Strategic Alignment**

\*Seemingly Unrelated Regression with Tobit and Latent Variables

#### **Bureau of Transportation Statistics**

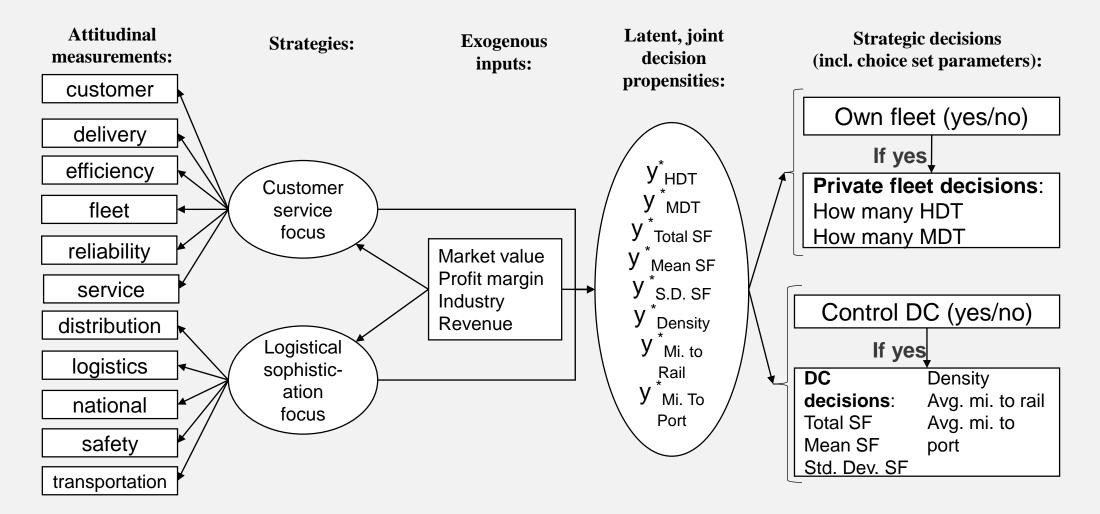

Stinson and Mohammadian (under review). A Method to Integrate Strategic Alignment in Freight Transportation Behavioral Models. Preprint: https://papers.ssrn.com/sol3/papers.cfm?abstract\_id=4998439

5

### **Strategic Alignment**

HDT (MDT): heavy- (medium-) duty trucks DC: distribution center

#### Applying the SURTLV model:

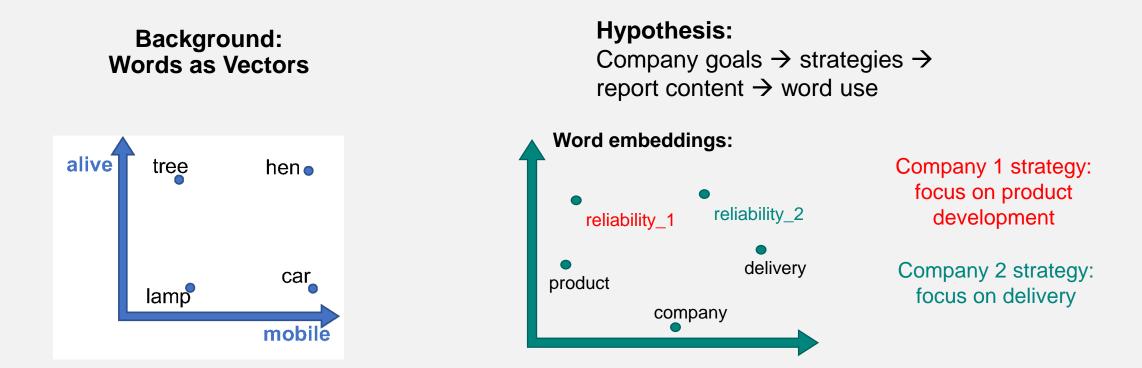

#### **Bureau of Transportation Statistics**

Stinson and Mohammadian (under review). A Method to Integrate Strategic Alignment in Freight Transportation Behavioral Models. Preprint: https://papers.ssrn.com/sol3/papers.cfm?abstract\_id=4998439

# Natural Language as a Source of Strategy Data

- Strategy data sources
  - Surveys (challenges: burdensome, expensive, pre-determined questions,...)
  - Natural language text sources
- Freight examples: company reports and letters to shareholders
- Annual reports describe the collective views of company executives and actions of the company
- US Securities and Exchange Commission (SEC) requirement: publicly owned US companies file an annual 10-K report
- Fortune 500 companies in freight-intensive sectors

## **W2VPCA: Generating Strategy Measurements from Natural Language**

#### **Bureau of Transportation Statistics**

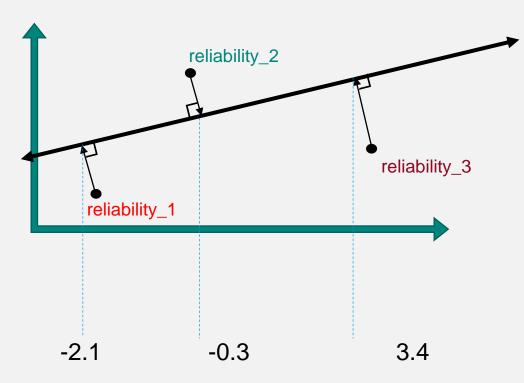

Stinson and Mohammadian (2024). W2VPCA: A Machine Learning Method for Measuring Attitudes With Natural Language. IEEE Transactions on ITS. https://ieeexplore.ieee.org/document/10495211

# **W2VPCA: The Algorithm**

- 1. Select keywords to serve as strategy measurements
- 2. Tag each keyword to be companyspecific
- Apply word2vec (Mikolov et al., 2013)
- 4. Apply Principal Components Analysis (Pearson, 1901)
- 5. Measure differences on principal component

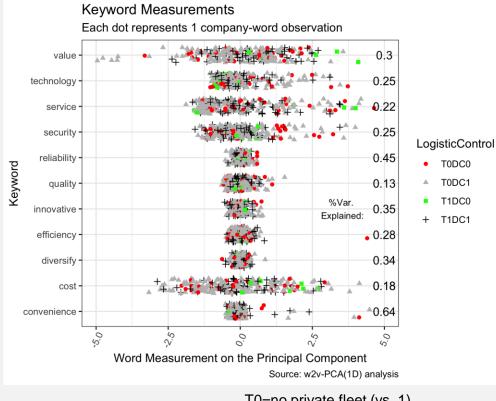

#### Claim:

#### W2VPCA output = strategy measurements:

# **W2VPCA Results**

## Measurements for 11 Keywords (250 companies)

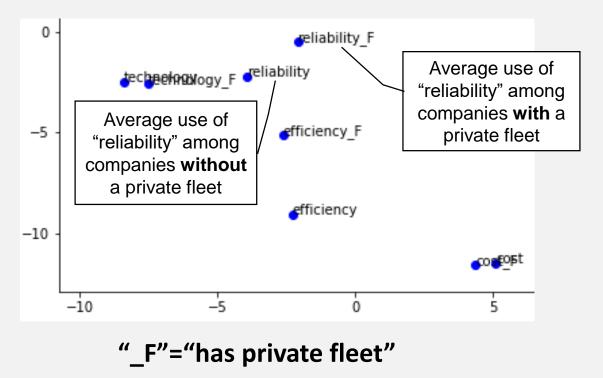

#### T0=no private fleet (vs. 1) Bureau of Transportation Statistics DC0=does not own/lease DC (vs. 1)

#### **250 US Fortune 500 companies in freight-intensive sectors**

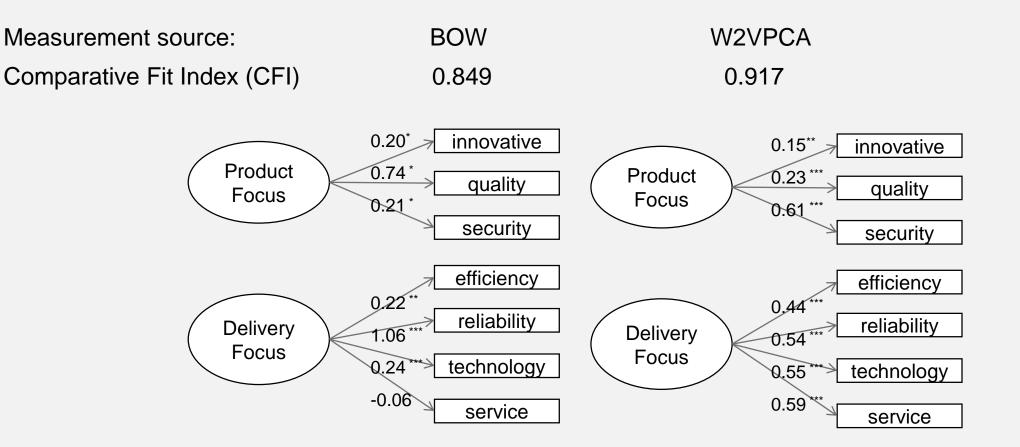

- Text data: SEC 10-K reports from 2017
- Distribution center data: CoStar real estate data
- Fleet data: FleetSeek magazine

#### Measurements for 4 Keywords (Two Groups of Companies) – Projected from 100-space to 2-space using the 1<sup>st</sup> two PCs

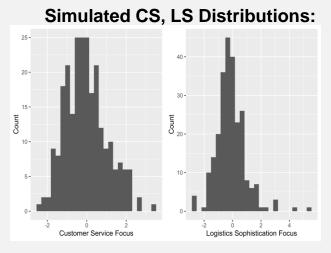

### **Application 1: Confirmatory Factor Analysis (CFA)**

#### **Result:** W2VPCA CFA Yields Good Fit; Bag-of-Words (BOW) CFA is rejected

### **Application 2: SURTLV Model Using W2VPCA Measurements**

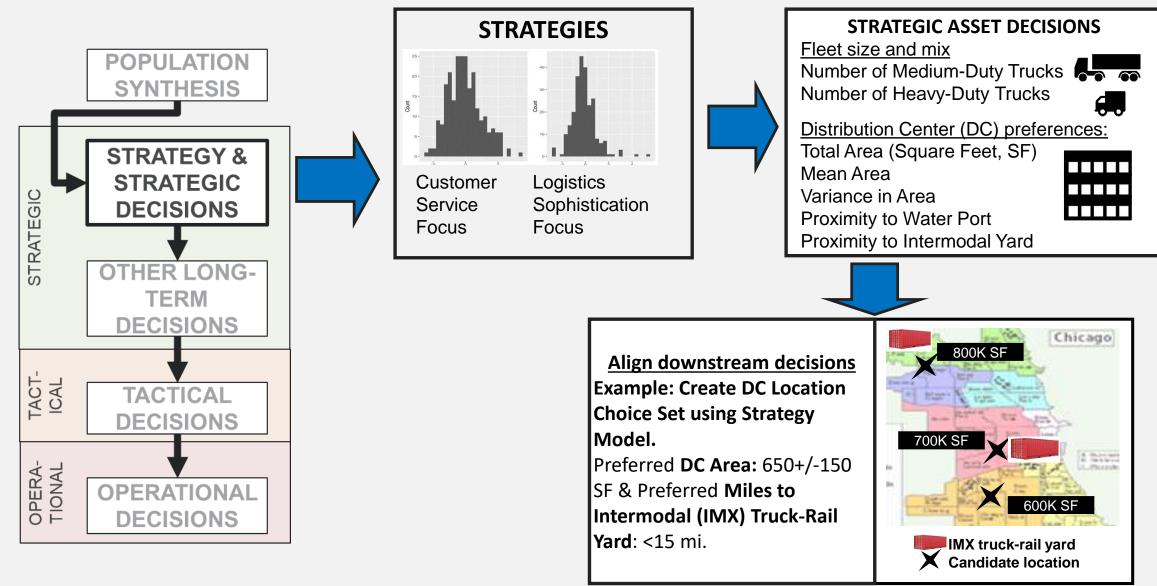

Measurement	z*: Customer service (CS) focus			Measurement	z*: Log	z*: Logistical sophistication (LS) focus		
variable h:	Est	t. (s.d.)	t-stat	variable h:	Est	t. (s.d.)	t-stat	
customer	0.77	(0.08)	9.50	distribution	0.74	(0.09)	8.29	
delivery	0.18	(0.07)	2.64	logistics	0.19	(0.07)	2.74	
efficiency	0.09	(0.07)	1.31	national	0.05	(0.07)	0.75	
fleet	0.04	(0.07)	0.65	safety	0.16	(0.07)	2.17	
reliability	0.07	(0.07)	1.02	transportation	0.35	(0.07)	4.66	
service	1.06	(0.09)	11.99					

	Strategic decision d:	Tot. SF			Mean SF		
	Variable (x, z*)	Est. (s.e.)		t-stat	Est. (s.e.)		t-stat
	Intercept	-4.03	(0.97)	-4.14	-0.54	(0.72)	-0.75
	Food/Petro./Gases	-0.15	(0.28)	-0.55	-0.64	(0.21)	-3.07
	Retail/Wholesale	0.49	(0.21)	2.32	0.07	(0.16)	0.46
	Revenue	5.08	(1.01)	5.04	1.85	(0.75)	2.48
	Customer service (CS) focus	-0.12	(0.11)	-1.14	-0.17	(0.08)	-2.10
7	Logistical sophistication (LS) focus	-0.38	(0.12)	-3.14	-0.26	(0.09)	-2.96

<sup>→</sup> CS, LS influence distribution center decisions (total area; avg. size; …)

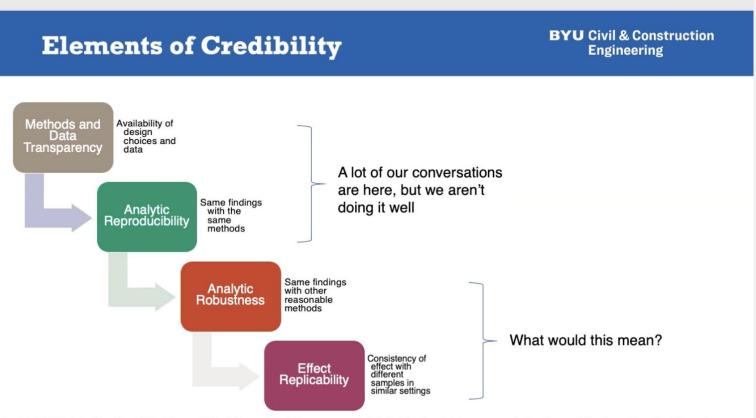

### **Strategic Alignment Demo**

# **Elements of Credibility**

## Reflections

Please reflect on the graphic below on the Elements of Credibility for scientific findings, particularly in regard to your own ABM research as well as to ABM research as a whole. Are we achieving these elements? If so, how? If not, how could we? How important is it for us to do so? If you are giving a presentation, please use a few of your podium minutes to share these reflections.

LeBel EP, McCarthy RJ, Earp BD, Elson M, Vanpaemel W. A Unified Framework to Quantify the Credibility of Scientific Findings. *Advances in Methods and Practices in Psychological Science*. 2018;1(3):389-402.

# **Thoughts for Future Research: Stability of Strategies over Time**

# **Evaluating Strategies over Time**

Research question: Are company strategies stable over time?

Hypotheses:

- Permanent strategies: temporally stable; importance may wax or wane
- Short/medium-duration strategies: firms will adapt (or abandon) other strategies over time
- Strategy magnitude and mix will vary in response to environmental factors (geopolitics, tariffs, climate disasters, ...), macroeconomic conditions, measurable success of the firm, and other factors

# **Research Design**

#### Design

- Retrospective analysis of company strategies and decisions ~last 25 years
- Repeat the work described above for select companies
- Gather supplemental data (esp. on environmental factors)

#### **Second research question**

What quantities are comparable across time?

- Measurements
- Strategies

Potential test: Apply SURTLV or other model  $\rightarrow$  the estimated parameters represent the impacts of strategy on observable strategic decisions  $\rightarrow$  are the parameter values similar in years when environmental conditions are similar?

# **Thank you!**
